🔗 WDI Homework - April 3, 2013

Sinatra

1. Finish creating your own version of http://pairprogrammingbot.com/ (http://pairprogrammingbot.com/) using Sinatra, ERB templates, and **custom** CSS (Aron).
2. Continue working on the Sinatra database application:
   1. Add a layout that yields to a template
   2. Add a `/products` route that lists all the products in the store database (http://cl.ly/0Y3F313S3J30) in an HTML table
   3. Add a root route (`/`) that contains links to the `/users` and `/products` pages
   4. Add a back button on `/users` and `/products` that takes you back to the home page
   5. Style the tables using CSS
   6. If the product is on sale, display an image in the table
   7. Add "zebra stripes" to the table (rows alternate background colors, making them easier to read across)

Submit the assignment by commiting and pushing a repository to GitHub (no need to submit to Schoology).

Bonus

Make every table header clickable so that they will sort on that column.
